

Review Queue — Wireframes & Flow

Dyuthi T G • 2026-08-28 • low-fidelity, boxes and labels only

List view (default once more than 5 items are waiting)

Select	Who	What we'd say	Score	Action
[]	Amaya Reyes Head of Growth · Northwind	Comment — “This matches what I keep seeing, Amaya — the hard part is...”	100	[Approve] [Skip]
[]	Tom Okafor VP of Growth · DataForge	Comment — “This matches what I keep seeing, Tom — the hard part is...”	100	[Approve] [Skip]
[]	Marcus Bell Head of Growth · Segmenta	Comment — “This matches what I keep seeing, Marcus — the hard part is...”	100	[Approve] [Skip]
[]	Priya Sharma Growth Lead · Cloudrise	Connect — “Hi Priya, your post on activation loops was...”	88	[Approve] [Skip]
—	Daniel Hunt Director · Flowbase	Message — BLOCKED: reads as templated, no reference to their post	—	[Review]

Three rows in a row say almost the same sentence — visible at a glance, which a one-at-a-time screen could never show. The blocked row stays visible with its reason, never vanishes.

Single item view (opens when you click a row)

Amaya Reyes — Head of Growth, Northwind SaaS Match score: 100
Why matched: title match, industry match, seniority match
Draft: “This matches what I keep seeing, Amaya — the hard part is usually getting everyone to agree on it first. How did you handle that?”
Flag: near-identical to 2 other queued comments (Tom Okafor, Marcus Bell)
[Approve & schedule] [Edit] [Skip] [Never contact]

Showing why something was flagged

The reason sits directly under the draft, always visible — never behind a click.

Draft: “This matches what I keep seeing, Amaya —...”
Flag: near-identical to 2 other queued comments
Flag: generic — doesn't reference anything specific to Amaya's post

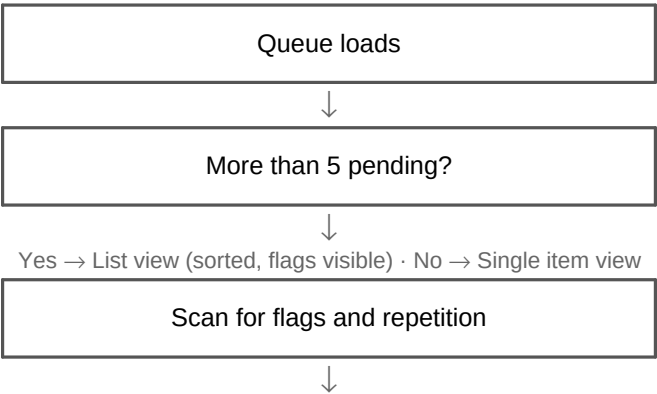

Actions — routine vs. destructive

Type	Buttons	Behaviour
Routine — one tap	[Approve] [Edit] [Skip]	Happens immediately, no confirmation needed.
Destructive — two taps	[Never contact] → “Confirm — never contact this person?” → [Confirm] [Cancel]	A permanent action always asks first. Set apart by distance and weight, not colour alone.

Failure states

Situation	What the screen shows
Nothing waiting	“Nothing waiting for review” + a button to go import more people.
400 things waiting	List view is forced (no one-at-a-time mode). Sort by score, plus “Approve top 20” as a safe shortcut.
A comment got blocked	Stays visible in the list, marked blocked, with the reason shown — never silently disappears.
Connection drops mid-edit	“Session expired — your edit is saved, reconnecting...” The unfinished edit is not lost.

User flow

Confident at a glance?

Yes → Batch approve / batch skip · No → Open single item

Read who + why + flags — all inline, no extra click

Decide: Approve · Edit · Skip · Never contact (confirm first)

Next item loads — or the empty state, if the queue is clear
